2 Delivery Processing in all SPAR Warehouses

2.1 Goods Arrival

2.1.1 General

The goods arrival can occur by truck in all SPAR Warehouses. The goods arrival by bus, car or any other small vehicle is not allowed and will lead to a rejection of the delivery.

Standard Delivery Condition for all regional Warehouses:

Delivery by truck behind first free lockable door or if existing onto the free conveyor equipment (Furthermore the SPAR Company general terms of delivery apply). For the unloading of the goods the suppliers will be supplied with manual pallet lifters, electrical pallet lifters and double-pallet fork lift trucks.

2.1.2 Goods Arrival Times – Fruit and Vegetables

Maria Saal	SA	07:30 – 09:30
	SU	06:30 – 10:00

The delivery windows, which are accorded with the warehouses, have to be met. If, for any reason, the delivery window can not be met, please inform the goods receiving of the respective warehouse immediately. Trucks, which arrive on the wrong date, will be rejected by the goods arrival.

If a delivery is late and SPAR is not informed about the delay the additional expense of EUR 10,- per pallet is charged.

2.2 Conditions for Delivery Processing

2.2.1 Loading Aids

IFCO-Palette

As loading aids SPAR prefers the use of the IFCO pallet (Endur E7) with the overall dimensions of 1200 mm x 800 mm. In this rental system, there is no pallet exchange. The empty pallets are collected directly from the regional warehouses by employees of the IFCO company for redistribution.

CHEP Pallet

As loading aids SPAR also accepts the use of the CHEP Europallet (B1208A), with the overall dimensions of 1200 mm x 800 mm. In this rental system, there is no pallet exchange. The empty pallets are collected directly from the regional warehouses by employees of the CHEP company for redistribution.

Europool Pallet

As a further loading aid SPAR accepts the Europool Pallet (DIN EN 13698-1). They are processed as described below (Pallet and reusable crates Processing).

Pallet and reusable crates Processing

Generally the pallets and reusable crates are processed by exchange. This means that the supplier receives the same amount of exchanged pallets/reusable crates as those delivered. One way, Overseas and Düsseldorfer pallets are not exchanged!

Exceptions to the Rule:

Should there, in exceptional cases, not be enough empty pallets/reusable crates for an exchange with the supplier, SPAR will retain the pallets/reusable crates as a gratuitous loan from the supplier. The truck driver will receive a confirmation with which the reclaim can be asserted. Reclaiming pallets/reusable crates is possible at any time during the following three months as soon as the (Original!) confirmation is produced. This rule is only applicable at the relevant Regional Warehouse. For reasons of accounting and stock keeping confirmations older than three months can not be redeemed. The possibility to reclaim will expire after three months.

Should the exchange not be possible on the part of SPAR, the confirmation will be extended for further three months.

2.2.2 Pallet Quality

SPAR will not accept or exchange pallets on which:

1. a board is missing, or broken either diagonally or straight across
2. a base or decking is so damaged or splintered that a nail or a screw is projecting
3. a block is missing or broken or so splintered that screws or nails are visible
4. there is not at least one identification symbol (EUR and pool-keeper logo) on each long side that is legible
5. the general condition is so bad that the load - bearing capacity is not guaranteed or where the loaded goods could be damaged or soiled

BEWARE:

An optimal quality of pallets enables an efficient flow of goods in the whole supply chain. In case of a poor pallet quality entry on material-handling equipment is not possible, the risk of breakage is high and goods and in the worst case consumers can be harmed by wooden splinters, projecting nails and extraordinarily dirty pallets.

Deliveries on poor quality pallets will be rejected by goods receiving, in order to accelerate the goods receiving process.

If the pallets don't meet the SPAR criteria, the supplier will be charged the additional work (EUR 20.- per pallet). Further SPAR charges the additional work to the supplier (EUR 20.- per pallet) for dirty pallets, which cannot be stored in our warehouses due to IFS logistics.

That is also valid for CHEP Pallets, which are distributed over cheaper rental models like the pickup from wholesalers. Such models can lead to a poorer CHEP pallet quality, because of not every pallet being checked and repaired at the CHEP service center. Due to cost and environment reasons this is of course reasonable, but it must not lead to a bad pallet quality. Therefore every supplier has to check the pallet quality prior to sending, otherwise additional expenses occur in the goods arrival. In case of an accumulation of damaged CHEP pallets we will charge it.

The number of defective pallets and the signature of the goods receiving personnel on the bill of delivery serve as a proof. SPAR has no burden of proof by photographs.

2.2.3 Pallet Goods-Shifting

The Pallet goods-shifting upon Goods Arrival must be no more than 5 cm.

No Pallet Shifting Before Transportation

Transportation Safety Devices

Transportation safety devices secure goods along their transport route (shifting of the goods, protection from theft, facilitation of manipulation etc.)

In order to protect the goods on the pallet (i.e. cartons and wooden crates), they must be secured with **corner moulds** and three **plastic retaining bands**.

(BEWARE – do not use nets and strings)

EXCEPTION: reusable crates need to be secured with only **2 retaining bands**

2.2.4 Pallet Heights

All warehouses are equipped according to EUL pallet heights.

The pallet heights are

ECR-Name	EUL-overall height incl. pallet
EUL 1	1.200 mm (goods + pallet)
EUL 1,4	1.620 mm (goods + pallet)
EUL 2	2.250 mm (goods + pallet)
EUL 1/2	675 mm (goods + pallet)
EUL 1/3	500 mm (goods + pallet)

Should the gross weight of the wholesale packaging unit constitute less than 12 kg, the pallet height may range up to 2,4 m. Should this weight be exceeded, the maximum height of the pallet is 2,15 m. Should the maximum pallet height of 2,4 m respectively 2,15 m be exceeded, SPAR reserves the right to charge 10 Euros per pallet.

2.2.5 Pallet Weight

The total weight of a pallet may not exceed **1000 kg**.

2.2.6 Delivery in Reusable Crates

SPAR insists on the delivery of IFCO-Reusable Cases (if not stipulated differently with the SPAR-sortiments manager).

Billing of IFCO Cases:

Deposit-free procedure between supplier and SPAR (as found in the guidelines of the deposit-free circulation incl. forms and reports).

Booking of the delivered IFCO-cases quantity in the IFCO Web Clearing portal

The quantities of the delivered IFCO-cases have to be booked in time in the IFCO Web Clearing portal. The IFCO cases are part of the delivery, therefore the booking in the portal has to be done at the time of delivery by the latest.

Every delay leads to additional work so that SPAR reserves the right to charge all suppliers, who have booked the delivered IFCO-cases late in time 25 Euros per delivery.

BEWARE: SPAR ONLY ACCEPTS GOODS IN CLEAN CASES!

Should the delivery not be in clean cases the following consequences apply:

1. Goods are not taken over
2. If the goods are taken over, the supplier will be charged EUR 0,51/case.
Should SPAR be charged for dirty cases, this charge will be passed on to the supplier.

2.2.7 Displays

Displays which exceed the weight of 25 kg have to be delivered - without exceptions - on dollies. The handling of such heavy displays (without a dolly) is not possible, neither in our outlets nor in our warehouses – most of the time the displays have to be manoeuvred by hand. A Dolly is a free-wheeling load bearing device which conforms to the European standard norms for Supply Chains in the Fast Moving Consumer Goods sector (i.e. ISO 3394 ff). Dollies have to be wrapped together in a quantity of four with the flexible wheels placed outside and the fixed wheels placed inside (if an appropriate amount is ordered). **For each ¼ displays, which exceeds the weight of 25 kg and is delivered without dolly, the supplier will be charged € 10,- per display.**

Displays below 25kg can be delivered on ¼ CHEP pallets alternately to dollies. ¼ CHEP pallets have to be delivered on a CHEP or Europallet in a quantity of four (if an appropriate amount is ordered). **A ¼ display below 25 kg without dolly or ¼ CHEP will be charged with EUR 10,- per display.**

Telefon: +49 (173) 493 99 33

2.2.8 Dangerous Substances

The regulations of the ADR governing **limited amounts** ("Consumer packaging") must be followed.

A summary of the most important points as an extract from the aforementioned regulations:

Dangerous goods counted as limited amounts if they are packaged and labelled according to the ADR:

- Packaging must be **composite packaging** i.e. numerous internal packages within an external package:
 - Numerous inner packaging within an outer packaging: for instance, in a box or
 - Numerous internal packaging in trays, combined into a packing unit with stretch (cling) or shrink film (Caution: only with use of inner packaging made out of metal or plastic – not for inner packaging made out of a different material like glass, may a stretch or shrink film be used instead of an outer packaging.)
- The **amount limits** (dependent upon the dangerous goods transport classification system) may not be exceeded:
 - For the highest allowable material amount per internal packing unit
 - In part, also the highest allowed material amount per transport item
 - In part additionally, for the highest allowed total mass of the transport item (i. e. the total mass of trays may generally not exceed 20 kg in total)
- The transport items (packets or trays) must be clearly and permanently marked:
 - with the ID number of the contained goods prefixed with the letters "UN":
 - with various goods with different ID numbers in the same transport item: with the ID numbers of the contained goods prefixed with the letters "UN" or with the letters "LQ"

This **ID marking** must be framed by a black line, creating a square balanced on it's point with a side length of at least 100 mm; if the size of the transport item requires, this label may have smaller dimensions as long as it remains clearly visible.

This labelling must be visible at all times. Therefore, each labelling of transport items must also be affixed to out packaging (i.e. wrap or shrink film for securing stacked items on a pallet) if this makes the direct labelling of the transport items no longer visible.

2.2.9 Condition of the pallet

- The goods must be stacked as **one product** per pallet, if the ordered quantity is at least one layer. However, intermediate pallets can be stacked on top of each other.
- Products, in danger of falling off, through transportation by truck, rail or in the warehouse, must be secured with **Transport protection** (Plastic film or a safety strap). If a plastic film is used, it must not be black.
- All boxes on a pallet must have the **same best before date and the same batch number**.
- As defined by IFS log the product safety is a must. That's why a **carton** has to be put **between the pallet and goods in easily damageable packaging**. So a damage trough splinters and other sharp items can be avoided and the product safety is guaranteed.

If the condition of the pallet is not conform with the above requirements, SPAR charges the additional expenses of EUR 10,- per pallet.

2.2.10 Condition of the picking unit

- The goods must be in **perfect** condition. This means no damaged or soiled goods etc.
- The delivery unit must be a **closed, compact unit** which permits **stacking in any position** on our roll cages (the goods must not fall out of the packaging).
- The **lid may not detach from the carton** when lifting (bänderols, glue spots, etc.).
- The **barcode must be easily found** and may not be attached to the lower side of the unit.
- **Heavy goods** (especially tin cans and glasses) must be **shrunk** in foil.
- When **Shelf Ready Packaging** is applied, the unit should be **at least as stable for it to permit efficient handling** in the warehouse (Glue to stabilise, bänderols etc.).
- The **size of the wholesale packaging unit (WPU)** should be **adjusted to the size of the retail packaging unit** in order to prevent damage.
- It is **not permitted** to pack **several WPUs in an overpackaging**. One unit must be one move.

If the condition of the picking unit is not conform with the above requirements, SPAR charges the additional expenses of EUR 0,5,- per picking unit.

2.2.11 Dispatch notes

For a proper goods arrival in our warehouses SPAR needs a correct delivery paper (delivery note, CMR), on which the SPAR order number has to be quoted. For each SPAR order number a delivery note has to be handed over to the bureau of the goods arrival.

If the SPAR order number is missing on the delivery note/CMR, the delivery note is missing or just placed on the goods or more than one SPAR order number is quoted on the delivery note, SPAR reserves the right to charge the supplier EUR 25,-. A delivery note isn't necessary, if all relevant information is noted on the CMR.

2.2.12 Pickup of returns

In case SPAR is refusing the goods arrival due to quality issues, the goods have to be taken immediately back to the supplier. If the goods are not taken back until 36 hours after the delivery, they will be littered at the cost of the supplier. In exceptional cases, which are pronounced to the suppliers, the goods have to be taken back immediately after the goods arrival.

3 Labelling

Please send us a sample label (pallet and WPU) prior to the first delivery for testing!

In case you are generating a GS1 barcode for the first time, please contact the GS1 institution of your country, to fulfil all requirements.

E-Mail: gruber@gs1.at

3.1.1 Pallet Labelling

SPAR requires the labelling of all pallets with the GS1-128 pallet label (ECR documentation „Harmonisierung GS1-128 – GS1 Transportetikett“).

If the GS1-128 and the SSCC are missing or are falsely encoded, SPAR will charge the supplier EUR 5 per pallet.

Data Content:

- | | |
|--|-------------------|
| • SSCC - Number of the pallet | AI (00) |
| • the GTIN-Number of the secondary packaging (Wholesale P U) | AI (02)* |
| • the packaging date <u>or</u> best before date** | AI(13) or AI (15) |
| • the batch number – if available | AI (10) |
| • amount of secondary packaging (WPU) on the pallet | AI (37) |

*The GS1-128 label must comprise the WPU GTIN which was agreed on with SPAR. Displaying other GTINs, for example the GTIN Number of the over packaging is not permitted.

Articles **without best before date need to have the AI 13 encoded in the product and pallet labelling.

Articles **with** best before date need to have the AI 15 encoded in the product and pallet labelling.

In addition SPAR requires the following indications on the GS1-128 label:

- name of the producer (descriptively stated = non encoded on the pallet label)

Module width/Barcode height:

Width: 0,495 – 1,016 mm

Height: 32 mm

Sticker/Label format (Recommendation):

DIN A5 210 x 148 mm (H x W)

DIN A6 148 x 105 mm (H x W)

Placement of the pallet labels

According to the ECR handbook, the GS1 transport-label must be applied 400 – 800 mm from the floor and at least 50 mm from the side. On transport secured pallets the sticker must be attached to the plastic film. One label must be applied on the narrow side and one on the long side to the right hand side of it.

For better processing in our warehouses, we would like to ask you to **attach the pallet label as far right as possible**. This allows us an optimal handling at every move of the pallet.

On low pallets it is allowed to bend the text field over the edge onto the top. The barcode part must be scan able without any further manipulation (ECR documentation „Harmonisierung GS1-128 – GS1 Transportetikett“).

Pallets that are stacked on top of one another for transport must be labelled individually with an SSCC-label.

Please attach this pallet destination note on every SPAR pallet. You can download the label under https://b2b.spar.at/imperia/md/content/b2b_spar_at/spar_palettenzettel_pallet_destination_note.xls

3.1.2 Product Labelling

WPU (Wholesale -Packing-Unit)

The secondary packaging should always include a GS1-128 Label.

The content must be clearly and visibly stated. This facilitates the allocation of the goods to the bill of delivery.

The following topics are important for proper labelling.

Data Content:

- the GTIN-Number of the secondary packaging (Wholesale P U) AI (01)
- the packaging date or best before date* AI(13) or AI (15)

*Articles **without** best before date need to have the AI 13 encoded in the product and pallet labelling. Articles **with** best before date need to have the AI 15 encoded in the product and pallet labelling.

Placement of the GS1-128 Label

In case of **IFCO cases and carton packaging** the etiquette has to be placed on the short side. All etiquettes must face the same direction, to avoid additional searching.

Should the labelling according to GS1-128 standards be missing or be falsely encoded, SPAR will charge the supplier a surcharge of EUR 0.37 per unit.

3.1.3 Barcode quality

In order to guarantee fast and efficient scans at the checkout counters and in the SPAR-wholesale warehouses, all barcodes have to meet the following quality standards:

The attached barcode symbol has to exhibit **at least** the following overall symbol class according to **ISO/IEC 15416**:

EAN-13/UPC-A:	1,5/06/670
EAN-8:	1,5/06/670
GS1-128 (EAN-128):	1,5/10/670
ITF-14:	1,5/10/670

whereby 1,5 is the overall symbol classification,
06,10 is the reference number of the bezel and
670 is the light wave length in nanometres.

The structure of the symbol has to comply with the respective specifications of the barcode symbology:

- EAN-13/EAN-8/UPC-A: according to GS1 specifications respectively ISO/IEC 15420
- GS1-128 (EAN-128): according to GS1 specifications respectively ISO/IEC 15417
- ITF-14: according to GS1 specifications respectively ISO/IEC 16390

In order to guarantee an optimal readability of all barcodes, SPAR recommends an overall symbol classification of **2,5**.

Whether the barcode symbol complies with the quality requirements can be verified by GS1 Austria (www.gs1.at).

5 Safety at Goods Receiving

Warehouse Premises

- Driving with an open auto hoist on SPAR warehouse premises is forbidden.
- The StVO is applicable on warehouse premises, with a maximum speed of 10 km/h and keeping to the right. Please beware of human traffic.
- The parking of vehicles is only permitted in the designated areas and only until unloading.

Goods receiving

- Follow the instructions of the goods receiving personnel.
- Access is only granted to the goods receiving area. All other areas of the warehouse may only be accessed when permitted.
- Before unloading the supplier has to register with the responsible goods receiving and show bill of lading and bill of delivery.
- The automatic lifting ramps are to be operated accordingly. Should the truck driver have no experience with these he must announce this to the SPAR personnel who will brief him.
- The unloading has to be carried out by the supplier.
- The unloading is only permitted with safety shoes.
- Should the pallet quality not comply with the standards of SPAR, the pallet will not be exchanged.

General

- The handling of SPAR owned electronic devices takes place at the users' risk. The supplier is liable for all damage occurred. Accidents and damage are to be announced to the goods receiving supervisor immediately and a report of the accident has to be written.
- All waste has to be removed accordingly.
- Smoking in the hall and the drinking of alcoholic beverages everywhere on the warehouse premises are strictly forbidden.
- Beware of frequent traffic with electronic devices at goods receiving.
- In case of a fire alarm, obey the instructions of SPAR personnel.
- Emergency exits have to be free at every time.
